

Exceeding Expectations... Every Day.

Managed Print Services

To get the most out of your organization's paper output devices (copiers, printers, and fax machines), LRI offers managed print services. MPS allows customers to outsource the management of their fleet of devices and realize significant savings. Typically, businesses spend between 1-3% of yearly revenues on document generation, and LRI can help businesses save money by monitoring printer usage, advising customers on fleet optimization, and automatically ordering supplies for the printers at a discounted price. Together, these features combine to save your organization a lot of time and money. In fact, Ankeny School District recently **saved over \$30,000 in their first year** using a MPS program from LRI.

LRI uses fmAudit software to remotely monitor the volumes run by each printer and the usage of its supplies. This lets LRI automatically refill toner and drop ship it directly to you without the your staff having to constantly check on each machine. This assures the your organization that the machines will always be well-supplied when needed. LRI conducts an assessment before beginning any MPS program to tell you exactly how much each of your printers is costing you to run. Then, LRI will create a detailed plan to optimize the your fleet and drive down your costs.

LRI has a wide variety of MPS capabilities, and an LRI representative will work with you to determine the best option for your needs. Two popular options include:

Payment per click

- Supplies
- Service Maintenance Plan
- Remote monitoring via fmAudit

Payment per cartridge

- Supplies
- Optional remote monitoring via fmAudit
- Service on HP, Lexmark, and Kyocera desktop printers
